Glass Options

Low-E and LoE³-366 insulating glass

Our standard high-performance Low-E insulating glass lowers energy costs, helps homes stay cooler in the summer and warmer in the winter, prevents fading of interior furnishings, and reduces condensation. It also delivers greater visible light transmittance than tinted glass. We also offer optional LoE³-366, which provides more protection against solar heat gain and fading, as well as greater energy savings. Windows and patio doors with Low-E glass are ENERGY STAR® qualified, which means they exceed the minimum energy efficiency criteria for the climate region you live in (by as much as 40 percent).

In warm weather, Low-E glass reflects the sun's energy and prevents it from entering the home.

In cold weather, Low-E glass reduces the amount of heat lost by reflecting it back inside.

Tempered glass

When glass is heat-treated during manufacturing, it is provided with extra strength, enabling it to withstand abnormal force or pressure on its surface—it will not break into sharp pieces. Local codes often require tempered glass to be used in all windows that are close to the floor or near doors, bathtubs or showers.

Impact resistant glass

This glass stands up to strong impacts from wind-borne as well as harsh coastal conditions. In fact, it features the industry's leading laminated glass technology that can withstand a nine-pound piece of lumber striking it head-on at approximately 34 miles per hour. It also reduces sound transmission, blocks up to 95 percent of harmful UV rays, enhances home security and comes with a 10-year warranty.
